

PRODUCT LAUNCH · KANTESTI VOICE

Kantesti gives every blood test report a voice

Kantesti Voice reads the key points of an AI blood test interpretation aloud, in the report's own language, in two short parts: the results in brief and what to do next.

NEW AI-generated voice · not a doctor
Listen to your AI interpretation
 Your report explained aloud, in the language you chose

 **In your premium report** 1 min
 What to do next

Part 1 · free in every demo

Part 2 · premium

AT A GLANCE

~2 min two short parts instead of pages of text	101 report languages, each read in its own language
39 interface languages for the player	0 s added to report time; audio is made in the background

LONDON, 27 September 2026 — Kantesti Ltd, the UK-registered health technology company behind the Kantesti AI blood test analyser, today announced **Kantesti Voice**, a new module that turns the written AI interpretation of a blood test into a short, spoken explanation.

A lab report and its interpretation are dense reading. Kantesti Voice gives people the two things they want first — what their results say and what to do next — as audio they can listen to in about two minutes, in the language they chose when they uploaded their test.

Everything the voice says comes from the report's own interpretation. It does not add new medical content, and it tells the listener clearly that it is an AI-generated voice, not a doctor.

TWO PARTS, ONE CLEAR STORY

1 · Your results in brief

FREE PREVIEW

About 35 seconds from the interpretation's summary and key findings. Included in every free demo report.

2 · What to do next

PREMIUM

About 80 seconds from the medical and lifestyle recommendations, suggested follow-up tests and final next steps.

AVAILABILITY

Rolling out to Kantesti web reports now. Part 1 is included in every free demo report. Both parts come with every premium report at no extra cost, including reports that clinics create for their patients.

HOW IT WORKS

From lab PDF to a two-minute explanation

01

Upload a blood test

A PDF or photo of any lab report, in any of 101 report languages. Kantesti reads the values and writes its AI interpretation.

02

The voice starts at once

The moment the interpretation is ready, Kantesti Voice prepares the audio in the background — the report is never kept waiting.

03

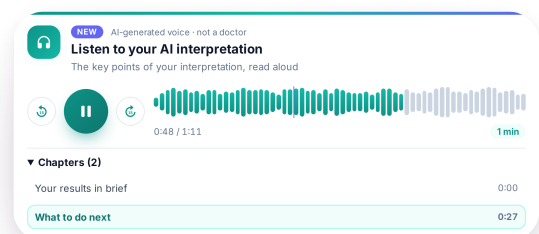

Press play

Part 1 plays in the free demo. Premium reports play both parts, with chapters, seeking and 15-second skips.

BUILT FOR TRUST

Clear about what it is, and what it is not

-  **Labelled as AI.** The player always shows “AI-generated voice · not a doctor”, and the audio reads only the report’s own interpretation.
-  **Their language, not ours.** The voice follows the language the report was written in — 101 languages, from Turkish and German to Arabic and Chinese.
-  **Private by design.** Audio is personal health data: it is streamed only to the report it belongs to, is never exposed as a downloadable file, and is deleted on a fixed schedule or when the report is deleted.
-  **Never in the way.** If audio cannot be made, the report is delivered exactly as before and the player simply does not appear.

Kantesti Voice in a premium report: two chapters, seeking and 15-second skips.

HOW PART 1 BEGINS

“Your results in brief. Most of your blood count is within range. Your ferritin is low, which may point to reduced iron stores...”

A blood test report is a lot to read when you are worried about the result. Most people want two answers: what does it say, and what should I do now? Kantesti Voice gives them both in about two minutes, in their own language — and it is honest that it is an AI voice, not a doctor.
